HOW TO USE THE SUBLINGUAL SPRAY?

Do not eat, drink or brush teeth 10mins before and after applying the vaccine

Uromune® works best when your mouth is in as natural a state as possible. For this reason, many prefer to spray Uromune® first thing in the morning

Shake the bottle gently

Lift your tongue and spray twice

Press the button quickly and firmly to release the medication as a spray. Pressing the button too slowly will cause the medication to come out in a stream instead, which is less effective.

Rotate the pipette back to its downward pointing position

2 Remove the plastic seal

3 **Only when starting a new, unused bottle:** first prime the bottle by rotating the pipette sideways and pressing the spray button 3 or 4 times to fill the pump mechanism.

You will not need to do this again until you start a new bottle.

4 Hold the dose under your tongue, for approximately 1-2 minutes before swallowing

5 Store the vaccine in its original packaging and keep it refrigerated (2-8 °C)

While the vaccine is still viable at room temperature for a few hours, if you need to travel, consider using an insulated container with an ice bag.

Dosage

Two sublingual sprays once daily

2 bottles of 9mL

Each spray dispenses 0.1 mL

Approximate duration of treatment (2 bottles): 3 months

PRODUCT CHARACTERISTICS

UROMUNE® is a glycerinated suspension containing whole-cell, inactivated bacteria, intended for specific sublingual immunotherapy.

Composition: The active substances are four whole cell-inactivated bacterial strains: *Klebsiella pneumoniae* (25%), *Escherichia coli* (25%), *Enterococcus faecalis* (25%) and *Proteus vulgaris* (25%) (300 FTU*/mL ~ 10⁹ Bacteria/mL).

Ingredients: Glycerol, sodium chloride, artificial pineapple flavouring and water for injection.

Pharmaceutical form: Suspension for sublingual spray.

Presentation: UROMUNE® is available in 2 vials, each of 9 mL, adequate for approximately 3-month treatment. It is packed in an amber glass vial, closed with a plastic cap containing a spray pump and an applicator for spraying, and secured by a seal.

Indications: UROMUNE® is a mucosal vaccine indicated for the prevention of recurrent urinary tract infections of diverse aetiology. It works stimulating the immune system, thereby increasing its resistance against urinary infections. UROMUNE® can be administered to adults, children and infants.

Administration instructions: UROMUNE® administration must be as separated as possible from the intake of meals and/or beverages in order to allow maximum exposure and contact of the product with the administration area. Do not brush teeth or rinse the mouth within 10 minutes of the administration of UROMUNE®.

Storage: Store in a refrigerator (2-8°C). Keep out of the sight and reach of children.

*FTU: Formazin Turbidity Units.
